FLEXGUARD PORTABLE FEATURES

System Specifications

The modular railing system comes in 10 foot sections with 5 foot return sections. System components can be powder coating over the galvanized finish in Safety Yellow as an additional option. In the event that damage does occur, the individual components can be replaced with another standard section with little effort.

Portable Base Weights

The system's base weights are made of recycled PVC and weigh a minimum of 90 pounds. The base weights are made up of two interlocking halves, and are supplied assembled. The weights can be easily split by removing two bolts allowing each half to be carried by a single person.
