

PLATFORMS FOR SAFELY CROSSING OBSTRUCTED ROOFTOPS

Accessing sorters and conveyors for inspection or maintenance always presents fall safety challenges. Flexible Lifeline Systems can help turn previously unused overhead space into walkway space suitable for overhead maintenance by designing and installing elevated catwalk systems with stair access, increasing safety and efficiency.

CATWALK APPLICATIONS

Common uses for catwalk walkway systems include:

- ▲ Machinery Access Catwalks provide safe access to conveyor systems and machinery.
- ▲ Attics Catwalks protect ceilings and workers when attic access is required.
- ▲ Clean Rooms Installations for observation and maintenance above clean rooms.
- ▲ Overhead Maintenance safe and efficient access for overhead maintenance work.
- ▲ Warehouse Space Catwalks can be used to provide access to warehouse racks and high shelving.

CATWALKS

CATWALK FEATURES

Versatile

Catwalk systems can be both suspended from structure or self supporting. Their modular construction allows for easy integration of gates, ladders, railings, and landings, and make installation fast and efficient, even in tight or hard to reach spaces. Flexible Lifeline Systems can custom engineer and quickly install a catwalk system for any need.

Cost Efficient & OSHA Compliant

Equipment rental to service overhead maintenance requirements such as ducts and lighting fixtures is expensive. Catwalks can save thousands of dollars in equipment and labor in the long run. Our catwalk systems are cost efficient and designed to exceed OSHA standards and keep your employees fully protected while working at height.
